

COLLABORATIVE INSTRUCTIONAL DESIGN SYSTEM (CIDS)

What is Collaborative Instructional Design System (CIDS)

The Collaborative Instructional Design System (CIDS), is the instructional planning system comprises of The Integral ASIE Instructional Design Model, and, special features of the Professional Learning Community, or PLC.

ASIE Model, is the 21st Century ID Model, a constructive process in designing the instructions, that provides **practitioners** in education, a valuable tool, and perspective, to enhance the quality of instructions, and training as well. The model will have an impact, on the development of theory and classroom practices, in the field of instructional technology. The model allows teachers to discuss their planning with their colleagues in the PLC program.

Besides, CIDS provide opportunities for individual in different communities, to contribute and share ideas, strategies, skills and knowledge, and interact with teachers upon request for enhancing and sustaining, the qualities of educations, especially in dealing with employability issues through the features in the Professional Learning Community.

Individuals are invited or voluntarily registered as a member of Professional Learning Community. They may choose to become a member in a particular community's group namely Educators, Administrators, Professionals and private group. This is a new approach in Corporate Social Responsibility (CSR) program that benefit society especially learners in the world of education.
